Question

If you have two divs that are both set to 90% width and one is within the other (i.e. one is a child div and the other is the parent div), how much of the screen would each take up?

A: the parent div will be 90% width of screen, child div would be 90% width of parent page, so it is $90\% \times 90\% = 81\%$ width of screen.
